*Alles begint en eindigt met familie* Fidan Ekiz 2019-02-19 Mijn ouders hebben de koers van mijn leven bepaald. Daarom heeft mijn familie zo'n belangrijke plaats in mijn werk. Wij maken deel uit van een voortgaande migratiegeschiedenis. Bij Fidan Ekiz raakt het maatschappelijke altijd aan het persoonlijke. In haar columns schrijft ze over het ziekbed van haar vader, die na een leven lang werken in Pernis overlijdt aan kanker. Ze haalt herinneringen op aan haar jeugd binnen de Turks-islamitische gemeenschap, een wereld die ver van Nederland afstond. Inmiddels is er veel veranderd. In haar thuishaven Rotterdam kijkt ze verontwaardigd toe tijdens de Turkije-rel. Dagelijks ondervindt ze hoe Nederland steeds verder polariseert, terwijl zij juist verlangt naar meer nuance. Haar betrokkenheid bij gevoelige onderwerpen

als de islam en integratie maken dat ze een unieke stem heeft in het maatschappelijk debat. Alles begint en eindigt met familie is Fidan Ekiz ten voeten uit: warm, humoristisch en altijd vol geestdrift over de staat van Nederland.

Nuclear Physics 1 Ibrahima Sakho  
2021-12-16 This book presents the foundations of nuclear physics, covering several themes that range from subatomic particles to stars. Also described in this book are experimental facts relating to the discovery of the electron, positron, proton, neutron and neutrino. The general properties of nuclei and the various nuclear de-excitation processes based on the nucleon layer model are studied in greater depth. This book addresses the conservation laws of angular momentum and parity, the multipolar transition probabilities E and M, gamma de-excitation, internal conversion and nucleon emission de-excitation processes. The fundamental

properties of  $\alpha$  and  $\beta$  disintegrations, electron capture, radioactive fissions, and Bateman equations are also examined. Nuclear Physics 1 is intended for high school physics teachers, students, research teachers and science historians specializing in nuclear physics.

Claims and counter-claims. Accusations and allegations. NSA spying and suppressed evidence. Cover-ups and threats. Documented connections and intrigue. Suggestions of a New World Order. Are we to believe the coincidences are mere chance? Might the paranoid be on to something? Who really holds the levers of power? History admonishes us to be vigilant of hidden plots and nefarious agendas of governments and the powerful. Shedding light onto sometimes sinister and coercive groups, Secret Societies: The Complete Guide to Histories, Rites, and Rituals is packed with details on nearly 200

organizations, their histories, found members, backgrounds, and suspected conspiracies. It uncovers and examines the hidden, overlooked, and buried history of some of the most notorious groups, including the Illuminati, the Freemasons, Skull and Bones, World Bankers, the Secret Government, and extraterrestrial invaders, to name a few. Tracing the chilling and corrosive affects of powerful cliques and their plots, it exposes their deep reach into the operations of today's world. Providing gripping details, presenting the facts, and letting the reader decide, this revealing work probes the hidden agendas and agreements of secret cabals and associations. Along the way, it debunks myths and presents the evidence on an invisible world of influence and power. *Zeg niets* Patrick Radden Keefe 2019-06-05

ontvoerd. Iedereen in de buurt weet dat de IRA verantwoordelijk is voor haar verdwijning, maar niemand durft erover te praten. In 2003 worden op een strand botten en een blauwe veiligheidsspeld gevonden. De kinderen van Jean herkennen de speld en beseffen dat hun moeder eindelijk is gevonden. Deze gruwelijke moord, een van de meest beruchte gebeurtenissen ten tijde van The Troubles, is het begin van het grote verhaal over het bittere conflict dat Noord-Ierland dertig jaar lang in zijn greep hield. Patrick Radden Keefe portretteert in dit meeslepende relaas radicale en onstuimige IRA-leden, zoals Dolours Price die als 22-jarige bommen plaatste, en The Dark, het meedogenloze brein achter IRA-operaties. Hij toont onomwonden de rol die het Britse leger speelde, met het vuile spel van oproerbestrijding en spionage. Een zeer kritisch licht werpt de auteur op Gerry

Adams, die de vredesbesprekingen leidde, maar zijn kameraden verraadde met de ontkenning van zijn IRA-verleden. Zeg niets is een aangrijpend boek over angst, verraad en wraak in een land dat nog steeds worstelt met zijn verleden.

Where do you begin to look for a recent, authoritative article on the diagnosis or management of a particular malignancy? The few general oncology textbooks are generally out of date. Single papers in specialized journals are informative but seldom comprehensive; these are more often preliminary reports on a very limited number of patients. Certain general journals frequently publish good in-depth reviews of cancer topics, and published symposium lectures are often the best overviews available. Unfortunately, these

reviews and supplements appear sporadically, and the reader can never be sure when a topic of special interest will be covered. *Cancer Treatment and Research* is a series of authoritative volumes which aim to meet this need. It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics, revised frequently to keep the coverage up to date, easily available on a single library shelf or by a single personal subscription. We have approached the problem in the following fashion. First, by dividing the oncology literature into specific subdivisions such as lung cancer, genitourinary cancer, pediatric oncology, etc. Second, by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis. Each topic and tumor type is covered in a volume appearing frequently and predictably, discussing current diagnosis,

staging, markers, all forms of treatment modalities, basic biology, and more. *New Worlds from Below* Tessa Morris-Suzuki 2017-03-20 In Asia today, the grand ideologies of the past have lost their power over the popular imagination. Even in many of the region's democracies, popular engagement in the political process faces profound challenges. Yet amidst this landscape of political disenchantment, groups of ordinary people across Asia are finding new ways to take control of their own lives, respond to threats to their physical and cultural survival, and build better futures. This collection of essays by prominent scholars and activists traces the rise of a quiet politics of survival from the villages of China to Japan's Minamata and Fukushima, and from the street art of Seoul and Hong Kong to the illegal markets of North Korea. Introducing an innovative conceptual framework, *New Worlds from*

Below shows how informal grassroots politics in Northeast Asia is generating new ideas and practices that have region-wide and global relevance.

**Een maaltijd in de winter** Hubert Mingarelli 2014-02-20 Een Duitse legereenheid kampeert al maanden in de bossen van Polen. Drie soldaten zien steeds

meer op tegen hun werkzaamheden - het executeren en in massagraven dumpen van onschuldige mensen - en vragen hun commandant om een andere taak. Die krijgen ze: in het bevroren woud moeten de soldaten op zoek naar zich schuilhoudende joden. Wanneer ze er - bijna tegen hun zin - een te pakken krijgen, besluiten ze voordat ze teruggaan naar het kamp eerst hun honger te stillen. In een verlaten huisje maken ze van hun laatste restjes een maaltijd, die ze delen met de joodse gevangene en een Poolse boer. Maar door die ogenschijnlijk eenvoudige handeling komen de soldaten voor een groot dilemma te staan: hoe leid je iemand naar het schavot als je de dag ervoor nog de maaltijd met elkaar hebt gedeeld? In een nauwkeurige, afgemeten stijl confronteert Mingarelli de lezer met de dodelijke logica waarnaar de soldaten moeten handelen, en daarmee met zijn eigen geweten.

**Wat als?** Randall Munroe 2014-10-16

Serieuze wetenschappelijke antwoorden op belangrijke hypothetische vragen Wat als? geeft hilarische en informatieve antwoorden op belangrijke vragen waar je nooit aan zou denken. Vragen als: • Als iedereen op aarde een paar weken bij elkaar uit de buurt blijft, is de verkoudheid dan niet de wereld uit? / br• Wat als je een baseball probeert te raken die met 90% van de snelheid van het licht op je af komt? / br• Van welke hoogte moet je een steak laten vallen om hem gaar te laten zijn als hij de grond raakt? / br• Als mijn printer letterlijk geld kan drukken, heeft dat dan grote gevolgen voor de wereld? / br• Wat gebeurt er als iedereen op aarde zo dicht mogelijk bij elkaar gaat staan en opspringt, waarna iedereen op hetzelfde moment neerkomt? De antwoorden van Munroe zijn kleine meesterwerken van duidelijkheid en

hilariteit aangevuld met zijn kenmerkende tekeningen. De antwoorden voorspellen vaak volledige vernietiging van de mensheid of op z'n minst een heel grote explosie. Randall Munroe is de bedenker van xkcd.com, de razend populaire website die elke week door miljoenen mensen wordt bezocht. Na z'n studie fysica bouwde Munroe robots bij NASA, waarna hij in 2006 fulltime striptekenaar werd.

## A Slow Death: 83 Days of Radiation

Sickness 2015-12-08 Japan's worst nuclear radiation accident took place at a uranium reprocessing facility in Tokaimura, northeast of Tokyo, on 30 September 1999. The direct cause of the accident was cited as the depositing of a uranyl nitrate solution--containing about 16.6 kg of uranium, which exceeded the critical mass--into a precipitation tank. Three workers were exposed to extreme doses of radiation. Hiroshi Ouchi, one of these workers, was

transferred to the University of Tokyo Hospital Emergency Room, three days after the accident. Dr. Maekawa and his staff initially thought that Ouchi looked relatively well for a person exposed to such radiation levels. He could talk, and only his right hand was a little swollen with redness. However, his condition gradually weakened as the radioactivity broke down the chromosomes in his cells. The doctors were at a loss as to what to do. There were very few precedents and proven medical treatments for the victims of radiation poisoning. Less than 20 nuclear accidents had occurred in the world to that point, and most of those happened 30 years ago. This book documents the following 83 days of treatment until his passing, with detailed descriptions and explanations of the radiation poisoning.

**X-ray Microscopy** Chris Jacobsen  
2019-12-19 Written by a pioneer in the

field, this text provides a complete introduction to X-ray microscopy, providing all of the technical background required to use, understand and even develop X-ray microscopes. Starting from the basics of X-ray physics and focusing optics, it goes on to cover imaging theory, tomography, chemical and elemental analysis, lensless imaging, computational methods, instrumentation, radiation damage, and cryomicroscopy, and includes a survey of recent scientific applications. Designed as a 'one-stop' text, it provides a unified notation, and shows how computational methods in different areas are linked with one another. Including numerous derivations, and illustrated with dozens of examples throughout, this is an essential text for academics and practitioners across engineering, the physical sciences and the life sciences who use X-ray microscopy to analyze their specimens, as well as those

Als de rook om je hoofd is verdwenen  
Caitlin Doughty 2014-10-25 In *Als de rook om je hoofd is verdwenen* vertelt Caitlin Doughty hoe ze op achtjarige leeftijd een leeftijdgenootje dood ziet neervallen. Dit moment raakt haar diep, maar haar ouders, die ook getuige zijn van het ongeluk, weigeren erover te praten. Ze hekelt de manier waarop haar ouders, en vele anderen in het Westen, met de dood en dode mensen omgaan en besluit daarom op twintigjarige leeftijd in een crematorium te gaan werken. Over haar jaren in het crematorium schrijft ze zonder iets te verbloemen over het dode lichaam, het ophalen van lijken, de preparatie in het

crematorium, de verbranding, de verwerking van botten en het verzamelen van de as. Op liefdevolle wijze en met de nodige (zwarte) humor maakt ze de dood bespreekbaar.

explore translational systems approaches toward resilient management and policy for sustainability. In *Unsafety*, the author focuses on the kinds of unnatural disasters and organizational accidents that arise as repercussions of natural hazards. Japan serves as an example, where earthquakes, tsunamis, and typhoons are common, with the Fukushima nuclear disaster as an outstanding case of this link between natural disasters and organizational accidents. Natural and human-made disasters happen worldwide and cause misery through loss of life; destruction of livelihoods as in agriculture, fisheries, and the manufacturing industry; and interruption of urban life. *Unsafety* from a disaster in one place increases uncertainty elsewhere, presenting urgent issues in all nations for individuals, organizations, regions, and the state. The author explains that one factor in the Fukushima

catastrophe, which followed in the wake of the earthquake and tsunami in 2011, was the latent deterioration and aging of systems at all levels from the physical to the social, leading through a chain reaction to unsought and unforeseen consequences. Here, the aging of the nuclear reactor system, the breakdown of safety management, and inappropriate instructions from the regulatory authorities combined to create the three-fold disaster, in which technological, organizational, and governmental dysfunction have been diagnosed as reflecting a “systems pathology” infecting all levels.

Written by leading expert, John Nagelhout, CRNA, PhD, FAAN, and new contributing author Sass Elisha, EdD, CRNA, Nurse Anesthesia, 6th Edition features both scientific principles and evidence-based material. Inside you'll find a solid introduction to the history, education, and legal issues of nurse anesthetist, its scientific foundations, equipment and monitoring, and preoperative evaluation and preparation of the patient. This new edition includes chapters on patient centered care and cultural competence, additional drugs of interest, blood and blood component therapy, anesthesia management for patients with cardiac devices, anesthesia for robotic surgery, anesthesia for transplant surgery and organ procurement, and physiology and management of acute and chronic pain. Not only a key reference for practicing nurse anesthetists, this bestseller prepares you

for certification and today's clinical anesthesia practice. New coverage includes the latest specifics of pharmacokinetics, drug delivery systems, opiate antagonists, and key induction drugs. Updated information on patient safety, monitoring, and pharmacology. Unique! Expert CRNA authors provide the current clinical information that you will use in daily practice. Over 700 tables and boxes highlight the most essential information in a quick, easy-to-reference format. Easy-to-use organization covers basic principles first, and builds on those with individual chapters for each surgical specialty. Life and Death Rays Alan Perkins

2021-07-05 This unique book provides an accessible introduction to both the scientific background and the key people involved in the discovery and use of radiation and radioactivity. It begins by providing a short history of radiation exposures and radiation poisoning; from the early inappropriate use of X-rays and radium cures through the misadventures of the Manhattan Project and the Chernobyl disaster, to the high-profile and deliberate poisoning of Alexander Litvinenko in London with polonium-210, which gave rise to worldwide media attention. The chapters

provide a catalogue of deliberate criminal acts, unfortunate accidents, and inadvertent radiation exposures, exploring well-known events in detail, as well as some not so well-known occurrences. It works through the topics by focusing on human stories and events and their biological impact. In addition, it covers descriptions of the beneficial uses of radiation and radioactivity. This book can be enjoyed by any reader with a general interest in science, as well as by students and professionals within the scientific and medical communities. Key features  
Authored by a subject area specialist who has worked in both clinical practice and academia and was involved with the national media following incidents of national and international importance

**Het onsterfelijke leven van Henrietta Lacks** Rebecca Skloot 2017-11-14 Haar naam was Henrietta Lacks, maar de medische wereld kent haar als HeLa. In de jaren '50 werden haar kankercellen zonder dat zij dat wist bij haar weggenomen. Met behulp van deze cellen, die letterlijk onsterfelijk zijn, werden de meest uiteenlopende geneeskundige ontdekkingen

gedaan en rond de verkoop ervan ontstond een miljoenenindustrie. Het leven van Henrietta bleef echter vrijwel onbekend en ook haar familie wist tot ruim dertig jaar geleden niet van het bestaan van de cellen af. Rebecca Skloot vertelt het verhaal van de 'HeLa-cellen', maar laat ons vooral ook kennis maken met Henrietta, haar verleden en haar familie, die nog steeds worstelt met de nalatenschap van de cellen. Ze laat zien dat het verhaal van de familie Lacks onlosmakelijk verbonden is met de duistere geschiedenis van het experimenteren met Afrikaans-Amerikanen, het ontstaan van de ethiek binnen de biologie en de juridische strijd over de vraag of we de baas zijn over de materie waarvan we zijn gemaakt.

The Boy Who Played with Fusion Tom Clynes 2015-06-09 This story of a child prodigy and his unique upbringing is “an engrossing journey to the outer realms of science and parenting” (Paul Greenberg, author of *Four Fish*). A PEN/E. O. Wilson Literary Science Writing Award Finalist Like many young children, Taylor Wilson dreamed of becoming an astronaut. Only Wilson mastered the science of rocket propulsion by the age of nine. When he was eleven, he tried to cure his grandmother’s cancer—and discovered new ways to produce medical isotopes. Then, at fourteen, Wilson became the youngest person in history to achieve nuclear fusion, building a 500-million-degree reactor—in his parents’ garage. In *The Boy Who Played*

with Fusion, science journalist Tom Clynes narrates Wilson’s extraordinary story. Born in Texarkana, Arkansas, Wilson quickly displayed an advanced intellect.

Recognizing their son’s abilities and the limitations of their local schools, his parents took a bold leap and moved the family to Reno, Nevada. There, Wilson could attend a unique public high school created specifically for academic superstars. Wilson is now designing devices to prevent terrorists from shipping radioactive material and inspiring a new generation to take on the challenges of science. If you’re wondering how someone so young can achieve so much, *The Boy Who Played with Fusion* has the answer. Along the way, Clynes’ narrative teaches parents, teachers, and society how and why we urgently need to support high-achieving kids. “An essential contribution to our understanding of the most important underlying questions
