Critical Issues in Education Jack L. Nelson 2020-08-12 Critical Issues in Education examines three questions that are at the core of the education debate in the United States: What interests should schools serve? What knowledge should schools teach? How do we develop the human environment of schools? When answering these queries the authors advocate the use of critical thinking, which includes dialogue and dialectic reasoning. Dynamic and interactive, dialogue requires listening and assessment, while dialectic stimulates the development of a creative response that encompasses both sides of an issue. When applied, these approaches engender an informative and stimulating discussion. In order to explore the depth of

current educational issues, the Ninth Edition considers 15 topics, providing supporting evidence and reasoning for two divergent views. These issues include violence in schools, the role of technology, gender equity, multiculturalism, inclusion and disability, and school choice. Both civic and professional discussions regarding improvements will have consequences for students, teachers, and society. As a result, educational views and the social landscape in which they reside deserve critical study.

The Perception of People Perry R. Hinton
2015-09-16 What are other people like? How do we decide if someone is friendly, honest or clever? What assumptions do we develop about them and what explanations do we give for their behaviour? The Perception of People examines key topics in psychology to explore how we make sense of other people (and ourselves). Do our decisions result from careful consideration and a desire to produce an accurate perception? Or do we jump to conclusions in our judgements and rely on expectations and stereotypes? To answer these questions the book examines models of person perception and provides an up-to-date and detailed account of the central psychological research in this area, focusing in particular on the social cognitive approach. It also considers and reflects on the involvement of culture in

cognition, and includes coverage of relevant research in culture and language that influence the way we think and speak about others. As well as providing a valuable text in social psychology, The Perception of People also offers a direction for the integration of ideas from cognitive and social psychology with those of cultural psychology, anthropology, sociology, philosophy and social history. Clear explanation of modern research is placed in historical and cultural context to provide a fuller understanding of how psychologists have worked to understand how people interpret the world around them and make sense of the people within it. Ideal reading for students of social psychology, this engaging text will also be useful in subject areas such as communication studies and media studies, where the perception of people is highly relevant.
