Fat Freddie Stephen Breen 2019-05-16 The No 1 Bestseller ‘A fascinating read’ Seán O’Rourke, RTÉ Radio One ‘Fat’ Freddie Thompson first appeared in court in 1997. He was sixteen and already aspiring to be a major crime boss. Over the next twenty years his criminal career would be marked by mayhem, brutality and murder. In 2000 a row over a failed drugs deal ignited a murderous feud in Dublin’s south inner city. The Crumlin-Drimmagh feud’s first victim was a friend of Thompson’s and he led his Crumlin crew in a series of tit-for-tat killings. Sixteen young men would lose their lives over the next fifteen years. Meanwhile, childhood friend, Daniel Kinahan, had become a senior figure in his father Christy Kinahan’s international crime cartel. Working with the Kinahan Cartel Thompson launched himself as a drugs dealer in Dublin. When another deadly feud broke out in 2016 - between the powerful Kinahans and veteran Dublin criminal, Gerry ‘The Monk ‘ Hutch - Thompson was ready to get his hands dirty. But Thompson’s loyalty would be his undoing. In August 2018 he was convicted of murder and jailed. Fat Freddie is a gripping account of the rise and fall of Freddie Thompson. Award-winning crime journalist, Stephen Breen, co-author of the No 1 bestselling The Cartel, has written the definitive portrait of a notorious Dublin gangster, a shocking story of double-crossing, vengeance and murder.

Systems Neuroscience Albert Cheung-Hoi Yu 2018-10-17 This edition of Advances in Neurobiology brings together experts in the emerging field of Systems Neuroscience to present an overview of this area of research. Topics covered include: how different neural circuits analyze sensory information, form perceptions of the external world, make decisions, and execute movements; how nerve cells behave when connected together to form neural networks; the relationship between molecular and cellular approaches to understanding brain structure and function; the study of high-level mental functions; and studying brain pathologies and diseases with Systems Neuroscience. A hierarchy of biological complexity arises from the genome, transcriptome, proteome, organelles, cells, synapses, circuits, brain regions, the whole brain, and behaviour. The best way to study the brain, the most complex organ in the body composed of 100 billion cells with trillions of interconnections, is with a Systems Biology approach. Systems biology is an inter-disciplinary field that focuses on complex interactions within biological systems to reveal 'emergent properties' - properties of cells and groups of cells functioning as a system whose actual and theoretical description is only possible using Systems Biology techniques.

Ladybug C. J. Michaels 2017-12-05 The ladybug initiates change when it is needed the most. In spite of its size, it appears to be fearless. Its presence, often associated with luck and the enabling of love and protection against harm, is also a pest intuitively focused on its task... LADYBUG is a passionate and psychologically vigorous debate between head and heart, and the ideal. Cara a cara with social stigmas, cultural undercurrents, crafty rhetoric and a sober understanding of the human condition, it remains however charmingly resilient and steadfast to the sensitive truths it lives by. Unable to make one feel indifferent to what the small but mighty definition of friendship is all about.

Hematology, Immunology and Infectious Disease: Neonatology Questions and Controversies Robin K. Remote Sensing Boris Escalante 2012-06-13 Nowadays it is hard to find areas of human activity and development that have not profited from or contributed to remote sensing. Natural, physical and social activities find in remote sensing a common ground for interaction and development. This book intends to show the reader how remote sensing impacts other areas of science, technology, and human activity, by displaying a selected number of high quality contributions dealing with different remote sensing applications.

EU Law Stories Fernanda Nicola 2017-05-29 Through an interdisciplinary analysis of the rulings of the Court of Justice of the European Union, this book offers 'thick' descriptions, contextual histories and critical narratives engaging with leading or minor personalities involved behind the scenes of each case. The contributions depart from the notion that EU law and its history should be narrated in a linear and incremental way to show instead that law evolves in a contingent and not determinate manner. The book shows that the effects of judge-made law remain relatively indeterminate and each case can be retold through different contextual narratives, and shows the commitment of the European legal elites to the experience of legal reasoning. The idea to cluster the stories around prominent cases is not to be fully comprehensive, but to re-focus the scholarship and teaching of EU law by moving beyond the black letter and unravel the lawyering techniques to achieve policy results.

Integrative Health through Music Therapy Suzanne B. Hanser 2016-05-25 Recent music therapy advances and evidence-based practices have earned respect within the medical sciences and garnered popularity amongst users and practitioners. While integrative medicine treats the whole patient with ayurvedic and allopathic medicine, music therapy provides a safe and effective way of managing stress, pain, unpleasant symptoms, response to illness, and treatment side effects, and has been proven to enhance patients’ quality of life and general wellbeing. Exploring the ways in which these methods have been practised throughout history, the author takes readers on a journey from illness to wellness, and shows how this can be guided through music. The book instructs music therapists and other practitioners in the use of specific techniques, providing examples of clinical applications. It includes activities that prepare a music therapist physically, emotionally and musically for this journey with another, and provides case studies to explore the difficulties that might arise.

Strategy Moves Jorge A. De Vasconcelos e Sá 2005 This book will become the bible of a bible for the field of business strategy for many years to come.An invaluable playbook of strategic moves for managers, marketers and entrepreneurs, covering all 14 known attacking and defending strategies, and backed up by over three hundred international examples. Backed up by copious examples from industry: more than 300 examples in the text, and a unique chapter case study on how Japanese auto firms conquered the US market using a combination of various moves covered in the book. Almost twenty years after the appearance of Al Ries’s groundbreaking Marketing Warfare, the time is right to bring the practitioners up to date with the thinking and show them how to use it. A Complete manual. The book is built around the 14 strategic moves. It shows you what move to use, how to use it, and when. Like a book of chess moves for business. Positioning and Marketing Warfare are two of the most successful books ever published in marketing/business strategy, and Strategy Plays clearly falls in that space. Will prominently feature endorsements from Kotler and from Ries.

Music and Disorders of Consciousness: Emerging Research, Practice and Theory Wendy L. Magee 2017-02-28 Music processing in severely brain-injured patients with disorders of consciousness has been an emergent field of interest for over 30 years, spanning the disciplines of neuroscience, medicine, the arts and humanities. Disorders of consciousness (DOC) is an umbrella term that encompasses patients who present with disorders across a continuum of consciousness including people who are in a coma, in vegetative state (VS)/have unresponsive wakefulness syndrome (LWS), and in minimally conscious state (MCS). Technological developments in recent years, resulting in improvements in medical care and technologies, have increased DOC population numbers, the means for

investigating DOC, and the range of clinical and therapeutic interventions under validation. In neuroimaging and behavioural studies, the auditory modality has been shown to be the most sensitive in diagnosing awareness in this complex population. As misdiagnosis remains a major problem in DOC, exploring auditory responsiveness and processing in DOC is, therefore, of central importance to improve therapeutic interventions and medical technologies in DOC. In recent years, there has been a growing interest in the role of music as a potential treatment and medium for diagnosis with patients with DOC, from the perspectives of research, clinical practice and theory. As there are almost no treatment options, such a non-invasive method could constitute a promising strategy to stimulate brain plasticity and to improve consciousness recovery. It is therefore an ideal time to draw together specialists from diverse disciplines and interests to share the latest methods, opinions, and research on this topic in order to identify research priorities and progress inquiry in a coordinated way. This Research Topic aimed to bring together specialists from diverse disciplines involved in using and researching music with DOC populations or who have an interest in theoretical development on this topic. Specialists from the following disciplines participated in this special issue: neuroscience; medicine; music therapy; clinical psychology; neuromusicology; and cognitive neuroscience.

Human Enhancements for Space Missions Konrad Szocik 2020-08-07 This book presents a collection of chapters, which address various contexts and challenges of the idea of human enhancement for the purposes of human space missions. The authors discuss pros and cons of mostly biological enhancement of human astronauts operating in hostile space environments, but also ethical and theological aspects are addressed. In contrast to the idea and program of human enhancement on Earth, human enhancement in space is considered a serious and necessary option. This book aims at scholars in the following fields: ethics and philosophy, space policy, public policy, as well as biologists and psychologists.

La contabilità dei costi del personale Andrea Sergiacomo 2013-01 La contabilizzazione dei costi del personale rappresenta, anche per gli addetti ai lavori, un’operazione non sempre facile e spesso fonte di dubbi: la presente guida ha l’obiettivo di illustrare, in maniera semplice e mediante l’ausilio di esempi pratici, come contabilizzare il costo del personale, evitando problematiche legate al non corretto appostamento delle voci nel bilancio di esercizio – soprattutto in presenza di eventi particolari, come la malattia, gli infortuni e così via – e alle conseguenti ripercussioni, in termini di imposizione fiscale. In virtù di questa considerazione, al fine di appostare correttamente tutte quelle voci di bilancio utili al calcolo delle imposte, è necessario valutare gli aspetti relativi agli oneri contributivi ed assicurativi, al fine dell’eventuale deduzione dalla base imponibile IRAP. La disamina, alle cui fondamenta soggiacciono i principi contabili, si caratterizza per il gran numero di esempi – che, di fatto, rappresentano una sintesi delle casistiche più comuni che possono incontrarsi in azienda – volti a consentire un rapido approccio al lettore, soprattutto in quelle situazioni di particolare urgenza, come nel caso di dover calcolare il costo per esigenze di budget. Viene, infine, proposto un caso concreto di contabilizzazione del costo, partendo dal cosiddetto “cedolone”, vale a dire il riassunto avvenuto nel periodo di lavoro considerato. Andrea Sergiacomo Dottore commercialista, Revisore legale dei conti, Mediatore civile, componente della Commissione cooperative O.D.C.E.C. di Roma e componente della Commissione diritto societario O.D.C.E.C. di Tivoli. Svolge attività pubblicistica per riviste specializzate in materia di bilancio, fisco e operazioni straordinarie.

Pathophysiology and epidemiology of virus-induced asthma Hirokazu Kimura 2015-01-26 Virus-caused asthma, we now call a phenotype of asthma. Regardless of the significance and popularity of this disease, the etiology of the virus-induced asthma has not well understood. In addition, a few effective vaccines have been applied to prevent respiratory virus infection. To solve the issues, it is essential to clarify and delineate both aspects of the virus and host defense systems including acute/chronic inflammation and airway tissue remodeling. To deeply review and discuss pathophysiology and epidemiology of virus-induced asthma, this topics includes new findings of the host immunity, pathology, epidemiology, and virology of asthma/chronic obstructive pulmonary disease (COPD). We believe that these works are well summarized and informative to glimpse the field of virus- associated asthma and COPD, and may help understanding the basic and clinical aspects of the diseases.

Experimental Approaches to Diabetic Retinopathy H.-P. Hammes 2010 This volume sets the stage for clinical experts working with diabetic patients as well as for researchers by describing the clinical presentations of retinopathy and their anatomical and functional correlates. It reviews currently available experimental models in animals. The impact of retinal pericytes, neuroglia and, specifically, Miller cells are discussed in detail. The volume addresses a variety of current scientific discussions about mechanisms of damage such as growth factors and the VEGF/PEDF balance in the diabetic eye, the ocular renin-angiotensin system, and leukocyte interactions with the microvasculature among others. Stem and progenitor cells in the retina are discussed as potential directions for future investigation. The final chapters return to emerging clinical aspects, including current approaches to retinopathy as a predictor of cardiovascular risk and how knowledge can be translated from bench to bedside. Bridging a widening gap in medical research between basic scientists, who may lose sight of the clinical presentations, and clinical researchers, who may grow unaware of the limits of experimental models, this volume serves as a reference platform for endocrinologists, diabetologists, ophthalmologists, as well as for scientists involved in clinical and basic research in diabetic retinopathy and other vascular complications of diabetes.
