Manual of Security Sensitive Microbes and Toxins Dongyou Liu 2014-04-08 Security sensitive microbes (viruses, bacteria, fungi, and parasites) and toxins, which are often referred to as the select agents and toxins, have the capacity to cause serious illness and death in humans, animals, and plants. Throughout history, these microbes and toxins have been exploited in one form or another as biowarfare and bioterror agents that create fear and panic well beyond any actual physical damages they might cause. Manual of Security Sensitive Microbes and Toxins provides comprehensive, state-of-the-art coverage of microbes and toxins of biosecurity concern. The ultimate goal is to increase our awareness of these agents and enhance our preparedness against any future bio-emergencies. The book begins with an introduction containing a brief overview of the historical aspects of security sensitive microbes and toxins. This is followed by a concise summary of the current status in relation to the regulation of security sensitive microbes and toxins and a discussion of future development trends. The book is divided into seven parts: Microbes and Toxins Affecting Humans and Animals: Viruses Microbes and Toxins Affecting Human and Animals: Bacteria Microbes and Toxins Affecting Human and Animals: Fungus and Parasite Microbes and Toxins Affecting Human and Animals: Toxins Microbes Affecting Animals: Viruses Microbes Affecting Animals: Bacteria Microbes Affecting Plants Written by experts in the relevant areas of research, the chapters are authoritative reviews, each one covering a single microbe or toxin with respect to its classification, biology, epidemiology, pathogenesis, identification, diagnosis, treatment, and prevention. The chapters also discuss the limitations of our current knowledge and challenges relating to improved detection and control of the microbe or toxin.

Jahnke 2022-04-19 CONTINUOUS EMISSION MONITORING The new edition of the only single-volume reference on both the regulatory and technical aspects of U.S. and international continuous emission monitoring (CEM) systems Continuous Emission Monitoring presents clear, accurate, and up-to-date information on the technical and regulatory issues that affect the design, application, and certification of CEM systems installed in power plants, cement plants, pulp and paper mills, smelters, and other stationary sources. Written by an international expert in the field, this classic reference guide covers U.S. and international CEM regulatory requirements, analytical techniques, operation and maintenance of CEM instrumentation, and more. The fully revised Third Edition remains the most comprehensive source of CEM information available, featuring three brand-new chapters on mercury monitoring, the reporting and certification of industrial greenhouse gas emissions, and the instrumentation and methods used to measure air toxic compounds including dioxins, furans, and hydrogen chloride. Thoroughly updated chapters discuss topics such as flow rate monitors, new EPA regulations, instrumentation and calibration techniques, CEM system control and data acquisition, and extractive system design. Providing environmental professionals with the knowledge of CEM systems necessary to address the present-day regulatory environment, Continuous Emission Monitoring: Discusses how CEM systems work, their advantages and limitations, and the regulatory requirements governing their operation Covers both the historical framework and technological basis of current CEM regulatory programs and standards in the United States, Canada, Europe, and Asia Offers practical guidance on sampling system selection, measurement techniques, advanced monitoring approaches, recordkeeping, and quality assurance Provides detailed technical descriptions of the technology necessary for regulatory compliance Includes new orthographic drawings to help instrument technicians and regulators with little technical background to easily understand key topics Continuous Emission Monitoring, Third Edition is an essential resource for professionals responsible for ensuring regulatory compliance, managers and technicians who purchase, operate, and maintain CEM instrumentation, regulatory personnel who write and enforce operating permits, and instructors and students in upper-level environmental engineering programs.

Special Features of the UN Model Convention Anna Binder 2019-10-01 Detailed research on the UN Model Convention’s unique features The UN Model Convention has a significant influence on international tax treaty practice and is especially used by emerging and developing countries as a starting point for treaty negotiations. Driven by the aim to achieve consistency in the international tax treaty practice, the structure and content is, to a large extent, similar in the UN Model and the OECD Model. However, whereas the OECD has historically focused its efforts on issues mainly relevant for developed countries, the UN Tax Committee has continuously attempted to specifically take into account tax treaty policies for developing countries when drafting and amending the UN Model Convention. Compared to the OECD Model Convention, the UN Model Convention aims at giving more weight to the source principle. Popular examples are the PE definition in the UN Model which provides for a lower threshold than Article 5 of the OECD Model or Article 12A on Fees for Technical Services which has been introduced with the latest amendment of the UN Model Convention 2017 and allows for a withholding tax to be levied on payments to non-residents when the payer of the fee is a resident of that contracting State irrespective of where the services are provided. Interestingly, in the discussions of

the tax challenges arising from the digitalization of the economy, the OECD and the G20 are also exploring options to allocate more taxing rights to the jurisdiction of the customer and/or user, i.e., the ‘market jurisdictions’. As this has traditionally been the focus of the UN Model Convention, its unique features and developing countries’ practices could be taken into account when exploring new nexus rules that are not constrained by the physical presence requirement. This book contains the master’s theses of the full-time LL.M. program 2018-2019 for which ‘Special Features of the UN Model Convention’ has been chosen as the general topic. With this book, the authors and editors do not aim at discussing each article of the UN Model Convention but rather focus on the unique features of the UN Model Convention, which are explored in detail. This is supplemented with an evaluation of the function and relevance of the UN Tax Committee in the international tax policy discussion and with an analysis of the influences of the OECD’s BEPS project on the UN Model.

Grenada pelagic longline, troll and dropline Atlantic Ocean yellowfin and bigeye fishery Sieben, C., Gascoigne, J. 2021-08-24 This report presents information on the Grenada tuna fisheries, the components and results of the pre-assessment itself, and recommendations to improve the fisheries’ status in relation to the Marine Stewardship Council Fisheries Standard. Grenada’s yellowfin and bigeye tuna fisheries were assessed against the MSC standard for sustainable fisheries. This standard encompasses three distinct principles: Principle 1 –sustainability of the stocks; Principle 2 – ecosystem impacts; and Principle 3 – effective management. Each Principle in turn comprises a set of performance indicators (PI), of which there are 28 in total. Overall, the pre-assessment identified a significant number of shortcomings that would currently preclude the fishery from achieving conformity with the MSC Fisheries Standard.

Science and Technology in International Economic Law Bryan Mercurio 2013-12-13 Science and technology plays an increasingly important role in the continued development of international economic law. This book brings together well-known and rising scholars to explore the status and interaction of science, technology and international economic law. The book reviews the place of science and technology in the development of international economic law with a view to ensure a balance between the promotion of trade and investment liberalisation and decision-making based on a sound scientific process without hampering technological development. The book features chapters from a range of experts – including Lukasz Gruszczynski, Jürgen Kurtz, Andrew Mitchell and Peter K. Yu – who examine a wide range of issues such as investment law, international trade law, and international intellectual property. By bringing together these issues, the book asks how international trade and investment regimes utilise science and technology, and whether they do so fairly and in the interest of broader public policies. This book will be of great interest to researchers of international economic law, health law, technology law and international intellectual property law.
